Dr: _____ and Dr: _____
(your name) (your name)

Date: _____

Immunity Breakdown

Instructions: You and your medical colleague need to prepare a brief speech to high school students about what happens when a person has a problem with the immune system. Read the TeensHealth.org article titled “Immune System” and choose an immune system disorder to report on. Use this handout to gather facts from the article and other sources (you can search for each disorder at TeensHealth.org). Then give a 1- to 2-minute report to the students.

Immune disorder: _____

Common age of onset: _____

Occurrence in population: _____

Cause: _____

Description: _____

Treatment: _____

Name: _____

Date: _____

Quiz

Instructions: Fill in the blanks with the words from the word bank.

1. The _____ system protects your body from sickness and germs.
2. _____ are white blood cells that seek out and destroy organisms or substances that can cause disease.
3. _____ are glands that work like filters to remove germs. They're found in your neck, armpit, and other areas.
4. Cells that chew up invading germs are called _____.
5. _____ are the cells that recognize invaders like germs.
6. Leukocytes travel through the body via lymphatic _____.
7. A foreign substance that invades your body is called an _____.
8. When your body detects an antigen, _____ are made and lock onto it. Once an antigen is recognized, your immune system can remember it the next time and protect you from getting sick again.
9. Humans are born with _____ immunity.
10. _____ is one of the best ways to avoid infections and help keep your immune system healthy.
11. _____ occur when a part of the immune system is not present or is not working properly.
12. When the immune system attacks healthy organs and tissues, it's called an _____ disorder.
13. An _____ reaction occurs when the immune system overreacts to exposure to antigens in the environment.
14. Acquired immunodeficiencies can develop as a result of burns, malnutrition, or other medical problems; or if a person takes certain medicines or has a _____.
15. An abnormal overgrowth of leukocytes results in _____, a form of cancer.

WORD BANK

allergic	disease	innate	lymphocytes
antibodies	hand washing	leukemia	phagocytes
antigen	immune	leukocytes	vessels
autoimmune	immunodeficiencies	lymph nodes	

Quiz Answer Key

1. The immune system protects your body from sickness and germs.
2. Leukocytes are white blood cells that seek out and destroy organisms or substances that can cause disease.
3. Lymph nodes are glands that work like filters to remove germs. They're found in your neck, armpit, and other areas.
4. Cells that chew up invading germs are called phagocytes.
5. Lymphocytes are the cells that recognize invaders like germs.
6. Leukocytes travel through the body via lymphatic vessels.
7. A foreign substance that invades your body is called an antigen.
8. When your body detects an antigen, antibodies are made and lock onto it. Once an antigen is recognized, your immune system can remember it the next time and protect you from getting sick again.
9. Humans are born with innate immunity.
10. Hand washing is one of the best ways to avoid infections and help keep your immune system healthy.
11. Immunodeficiencies occur when a part of the immune system is not present or is not working properly.
12. When the immune system attacks healthy organs and tissues, it's called an autoimmune disorder.
13. An allergic reaction occurs when the immune system overreacts to exposure to antigens in the environment.
14. Acquired immunodeficiencies can develop as a result of burns, malnutrition, or other medical problems; or if a person takes certain medicines or has a disease.
15. An abnormal overgrowth of leukocytes results in leukemia, a form of cancer.
