Quiz

Instructions: Answer each question.

1. HIV stands for __________________________ __________________________ __________________________.

2. AIDS stands for __________________________ __________________________ __________________________.

3. True or false: White blood cells are also called lycanthropes.

4. There are two types of leukocytes: ____________________________, which are cells that chew up invading germs; and ____________________________, which are cells that allow the body to remember and recognize previous invaders.

5. The HIV virus destroys part of the ___________________ system, specifically a type of white blood cell called a T lymphocyte or T cell (or CD4 cell).

6. True or false: Once inside a T cell (or CD4 cell), HIV uses it as a virus-making factory to make copies of itself. The new viruses then leave the T cell and destroy other healthy T cells as they multiply inside the body. T cells invaded by HIV can no longer fight infections properly.

7. A person is diagnosed with AIDS when the person has a very low number of ___ ____________ or shows signs of a serious infection.

8. Most people in North America get infected by HIV by:
   a) Sexual contact
   b) Kissing, hugging, or shaking hands
   c) Sharing needles or syringes with another person
   d) a) and c)
   e) a) and b)
   f) All of the above

9. True or false: Getting a vaccine can prevent HIV infection.
